Embedded:

1. Publish the report to Power BI service

2. Insert the URL or iframe to the web portal's HTML

3. If its share point, I can directly add the report in the plug it in from sharepoint link

Security:

1. New roles will be created using the **Manage Roles** feature, and once the report is published to the Power BI Service, these roles will be assigned to the appropriate users accordingly.

2. You can import a new table containing locations and their associated email IDs, define a relationship between this table and the existing data model, and then configure row-level security (RLS) using USERPRINCIPALNAME() in the **Manage Roles** section. After that, assign users to the appropriate roles in the Power BI Service.
